PEAK ELEMENT FINDER

Description

Description: You are given an N- dimensional array arr[]. A peak element in the array is defined as an element whose value is greater than or equal to its neighboring elements (if they exist). Your task is to find the index of any peak element in the given array

Note: use 0-based indexing

Input:

An integer representing the number of elements in the array. N space-separated integers, denoting the elements of the array.

N space-separated integers ,denoting the elements of the array arr[]

ENG.

Sample Input:

5

1 3 20 4 1

Sample Output:

2

Source Code:

```
N=int(input())
lst=list(map(int,input().split()))
mx=0
for i in range(0,N):
    if i==0:
        if lst[i]>lst[i+1]:
            mx=i
            break
                                                                                                                            SS NEAD
    elif i==(len(lst))-1:
        if lst[i]>=lst[i-1]:
            mx=i
            break
    else:
        if lst[i]>=lst[i+1] and lst[i]>=lst[i-1]:
            break
print(mx)
```
